Current number of Fellows: Twelve (12)

Annual Salary: \$51,426 (Academic year 2010-2011)

Special Requirements: Highly motivated in Regional Anesthesia and Acute Interventional Perioperative Pain Management

Regional Anesthesia Fellowship

The Department of Anesthesiology at the University of Pittsburgh is now accepting applications from anesthesiology residents trained in an ACGME accredited program. For details concerning the program please either visit the ASRA website or contact Dr. Jacques, E. Chelly at chelje@anes.upmc.edu. Interviews will be granted for the selected candidates after review of their completed application.

Comments: In 2008-2009 the Division of Regional Anesthesia and Acute Interventional Perioperative Pain performed over 17,478 blocks with over 60% continuous nerve blocks including lumbar plexus and continuous paravertebral blocks (in-patients and ambulatory). Ideal for trainees who want to become efficient in performing peripheral and paravertebral blocks. Each Regional fellow is expected to perform between 1,500-2,000 blocks during their fellowship. Most blocks are performed using either neurostimulation or ultrasound or both. Fellows are requested to attend weekly formal lectures, participate in a monthly journal club, an annual fresh cadaver dissection workshop, attend national meetings, serve as junior mentor to regional residents and participate in clinical research. Great opportunities for research.

*2 year advanced program with NIH clinical research track program available if qualified.
